SWEEPERS WITH HYDRAULIC DRIVE

Tractor sweepers are designed for sweeping and simultaneously collecting debris from flat surfaces such as roads, yards, sidewalks and more. The construction allows the sweeper to be mounted on a tractor or on popular models of front and telescopic loaders.

Hydraulically driven sweepers are simple, robust in design, efficient and reliable.

Standard equipment:

litter container with manual emptying

Additional equipment:

side brush

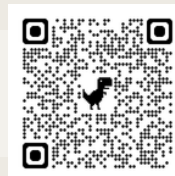

water sprinkling system

hydraulic emptying of litter container

front support wheel

electro valve divider

flow regulator

reliable

ROAD SPREADERS

N 031/2, N 031/21

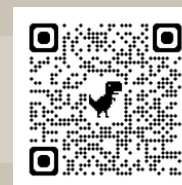

Motyl N 031/2 and N 031/21 municipal spreaders are equipped with dedicated municipal attachment and are designed for winter maintenance of roads, squares, parking areas and sidewalks.

They can spread salt, sand, grit or their mixtures.

During the summer season, the spreaders can also be used to spread granulate and powdered fertilizers on green areas such as lawns, sports fields and parks.

- precise** The use of a transport belt at the bottom of the hopper instead of a traditional agitator ensures even distribution of both granulate and powdered materials
- modern** A modern vibration module prevents material build up inside the hopper, ensuring even spreading and increased work efficiency
- durable** High resistance to the corrosive effects of salt and fertilizers thanks to the use of laminate and stainless steel in all components that has direct contact with the spreading material
- versatile** Smooth adjustment of spreading quantity and width allows the spreaders to be used in municipal, agricultural and gardening applications

ROAD SPREADERS N 031/2, N 031/21

ARE AVAILABLE WITH THREE HOPPER VERSIONS

polyester laminate

acid-resistant stainless steel (INOX)

**Additional equipment for
N 031/2, N 031/21**

hydraulic slide, canvas cover,

filter mesh, vibration module

road lighting

powder - coated carbon steel

SANDMAN

SANDMAN N 031/2 and SANDMAN N031/21 was developed for the most demanding users, made entirely of stainless steel, including frame, tension and drive drums, covers, discs and vanes.

The use of stainless steel in the spreader's construction has eliminated its only previous drawback – insufficient corrosion resistance of the frame.

Purchasing this version means a long-term investment with no need of repainting and significant time savings on cleaning and maintenance.

Fully made of stainless steel

Municipal attachment and vibration module in standard

LIQUID PUMPING DEVICE N 406

N 406 tractor pump is versatile device designed for pumping municipal sewage, water and other liquids that may contain solid contaminants up to 15 mm in size. The pump is powered by the tractor's hydraulic system and weighs only 37 kg.

It is used in agricultural farms, land reclamation works, construction sites and emergency operations such as flood relief

Thanks to its lightweight and compact design, transportation to the work site is effortless

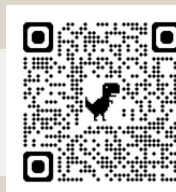

Hydraulic drive enables operation in any terrain, including areas without electrical power or during power cuts

High efficiency with low power consumption

Drive
hydraulic motor

Revolutions
1560 rpm

Maximum pump efficiency
1500 l/min

HYDROMIST P112/0

Hydromist sprinkler is designed for watering gardens, lawns, flower beds and other surfaces. It has a large 500 liter tank allowing efficient and productive work, as well as warning LED lighting and adjustable and changeable nozzles. It is ideal for even watering large areas making the job fast and easy.

HydroMist is used not only in agriculture and gardening, but also it works perfectly at washing and spraying streets, squares and parking lots.

This type of equipment is becoming more and more popular for natural and safe spraying against ticks, mosquitoes and other troublesome insects. Adjustable nozzle height and diameter enables more effective operation which fits to conditions and surroundings.

HydroMist is equipped with ergonomic, durable, brass spray gun with a 15 meter hose, ideal for cleaning small surfaces such as traffic signs, rinsing stairs or watering flowers or garden beds.

There is also growing interest in eco-friendly liquid alternatives to road salt such as calcium chloride and magnesium chloride which are used for winter road maintenance.

The HydroMist sprinkler is perfectly suited for the efficient and environmentally friendly distribution and use of such agents.
